KR 2000068927 A H04Q-007/30 Based on patent WO 9913665

Abstract (Basic): WO 9913665 A1

Abstract (Basic):

NOVELTY - The received field strength of a desired wave is measured (102), and the received field strength of an interfering wave is measured (103). The received strengths are compared (104) to calculate a D/U ratio and a frame error rate is measured (106). The future D/U ratio and frame error rate are estimated from their histories to switch (105) the communication channel.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for a channel switching apparatus.

USE - None given.

ADVANTAGE - The receiving status is obtained without interrupting the communication, thus improving the communication quality.

DESCRIPTION OF DRAWING(S) - The drawing shows
desired-wave received field strength sensor (102)
interfering-wave received field strength sensor (103)
comparator (104)
switch (105)
frame rate sensor (106)
